

RADIOLOGIC SCIENCE

Description: Radiologic Scientists are health professionals that perform medical imaging for diagnosis, assessment, and radiation treatment of disease.

Job/Salary Outlook: There is currently a critical shortage of qualified radiologic technologists, therefore the job market is highly favorable. Jobs are also expected to increase due to the increased demand for imaging services.

Program Options:

- **Radiography Certificate Program (20 months):** includes human structure and function, patient care, radiographic procedures, imaging and processing, etc.
- **B.S. Degree Program (24 months):** includes radiographic procedures and imaging as well as clinical education, management, and communication.

Program Prerequisites:

- **Certificate Program (at minimum):** high school biology, chemistry, and algebra; SAT scores of at least 800 or college credits for 3 courses with a grade of B or higher; and 8 hours of observation in a radiography clinical setting.
- **B.S. Program:** General biology with lab, anatomy & physiology with lab; general chemistry with lab or biochemistry with lab; general physics I & II with labs; and trigonometry & analytical geometry or calculus.
